

PASSIVE 1xN and 2xN SPLITTERS

AOFR's family of 1xN and 2xN optical splitters are pre-structured trees manufactured from AOFR's high performance FBT couplers. Splitters are designed for very low insertion loss and high uniformity, making these devices ideal for use as splitters in Passive Optical Networks (PONs) in Fiber to the Home (FTTH) and Fiber to the Curb (FTTC) architectures. Manufactured to Telcordia 1209 and 1221 guidelines these bidirectional devices are available in both dual window (wideband) and single window (wavelength flattened) versions and because of AOFR's unique manufacturing process, splitters do not exhibit a water absorption peak at 1383nm.
